

Prolender®
Miracle Integration Guide
9/6/06

Prolender interfaces data to Miracle Online using an application provided by MRG called MRGIFace. MRGIFace is available for download from the Miracle Online website.

Installation and Configuration of MRG System Interface

In order to utilize the Prolender Miracle Online interface, MRGIFace must be downloaded from the Miracle Online website and installed.

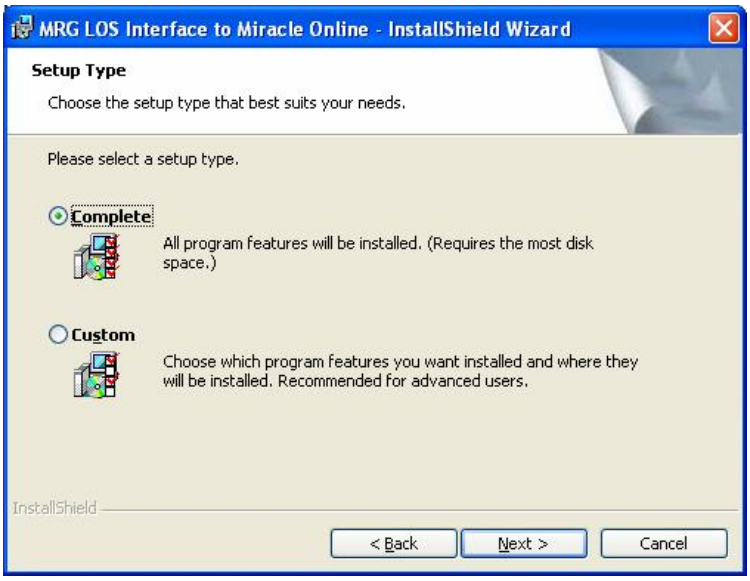

Installation

Prolender requires a downloadable plug-in that allows for Mismo Export. Please contact Prolender for help in downloading/installing this plugin.

Prolender places import files into a local directory on the user's workstation, typically "C:\". For this reason, MRG recommends installing each workstation as a Standalone Installation.

Standalone Installation

1. Download and install MRGFace from **each** workstation running Prolender. Installation will require administrative privileges. During the setup process choose "Complete" from the Setup Type dialog.

2. Launch MRGIFace from the desktop shortcut and follow the **Configuration** instructions below.
3. Repeat for all Prolender workstations.

NOTE: When ready to export loans, each user will need to start MRGIFace from the desktop shortcut and click "Process".

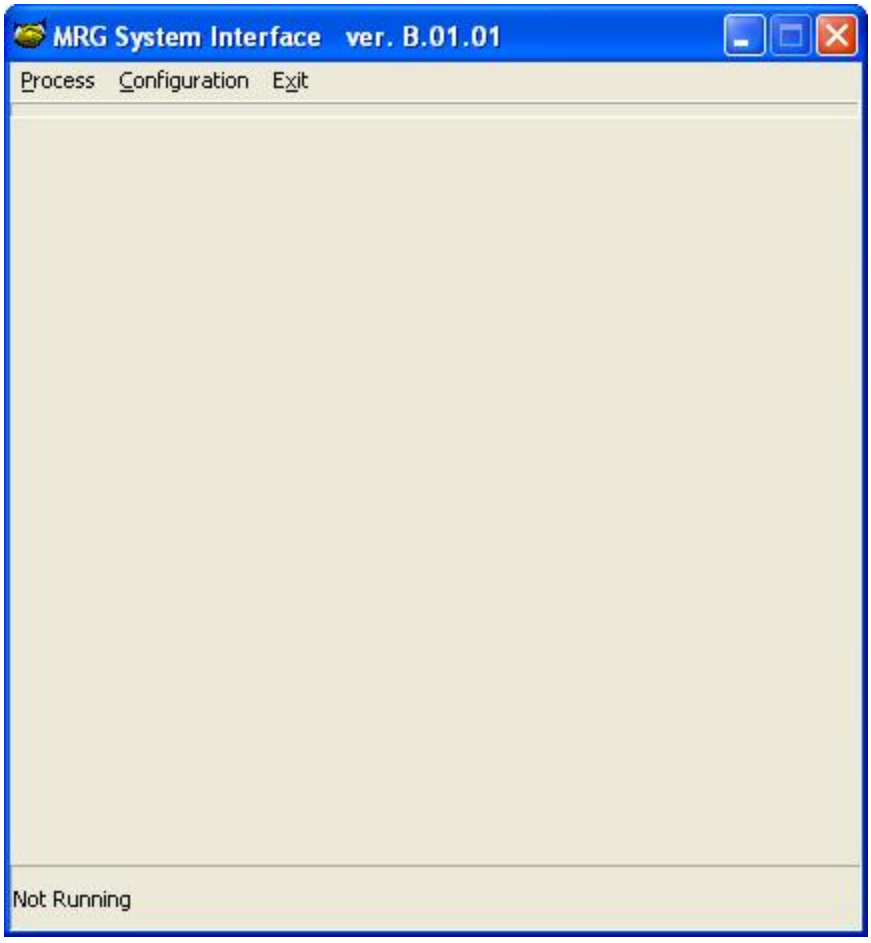

Configuration

Double-click on the MRG Interface icon

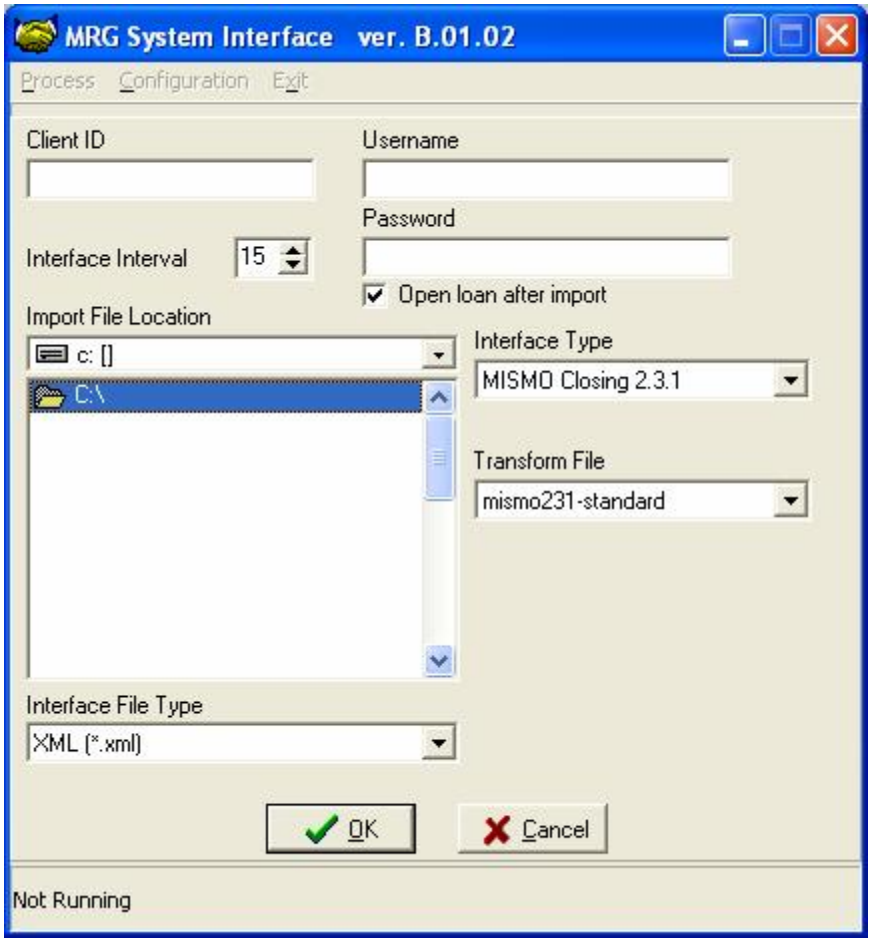

MRG System Interface.lnk

Click "Configuration" to view the current interface settings.

Verify the Import File Location is set to the same folder that Prolenders uses for its Export folder location, typically "C:\".

Select "MISMO Closing 2.3.1" for Interface Type, "mismo231-Standard" as the Transform File, and "XML (*.xml)" for the Interface File Type. Additionally, fill out Client ID, Username, and Password with the information provided by MRG staff. If you would like your web browser to open to the loan file after export, check the "Open loan after import" checkbox.

Click "OK" when complete and exit.

In order to process loans, MRGIFace will need to **remain running** on the workstation. MRGIFace will countdown and check for new files to process every few seconds.

Launch MRGIFace from the workstation running Prolender and click the Process button.

Exporting Loans to Miracle

The Prolender user will need to turn on MISMO export and take note of the export directory, typically "C:\".

The Prolender user will select to export the loan file, if MRGIFace is not running start it by clicking on the desktop shortcut and click "Process".

At this point, the MRG System Interface will pick up and process the file.

*

***** *Drive letters and folders may vary from what is displayed, depending on install path chosen.*

Once MRG System Interface has processed the file, the loan is available by logging into Miracle Online and accessing it through the Select Loan Screen. If you have enabled the "Open loan after import" checkbox, your web browser will be automatically opened and directed to the loan file that was just imported.
